Attention Home Owners Installing a Radon System

If you live within the Kingsford Study Area (see map below) it is important that you contact Arcadis before installing a radon system. Arcadis recommends that the standard radon fans, available to radon contractors, should not be installed within the Study Area, since these fans are not rated for methane. However, Arcadis on behalf of Ford and Kingsford Products, will provide a fan that is compatible with methane to be used in your radon system.

Arcadis will also work with your radon contractor to determine if any portion of an existing vapor control system (VCS), if present, may be used as part of the radon mitigation system. Please call Arcadis at 906.776.0206 or 906.776.0853 for further information.
